## SAMPLING

Accurate labeling of seed for sale begins with submitting a representative seed sample for laboratory testing.

Seed laboratory tests can accurately portray the quality of a seed lot only if the submitted seed sample is an accurate representation of that lot.

Appropriate sampling methods:

**BAGS:** Sample 1 bag out of each group of ten bags. Never sample less than 6 bags of seed unless the lot has fewer bags.

**BULK:** Sample at least 6 different locations and depths.

The quantity of seed collected during sampling will be larger than the amount of seed required for laboratory testing.

Thoroughly mix the collected seed sample and then divide the sample down to the appropriate weight needed for submission to the seed laboratory.

## APPROPRIATE SEED SAMPLE SIZE

Cereal Grains, Corn, Beans, Peas, etc. ....	1.25 lbs.
Small Seeded Legumes .....	0.25 lbs.
Grasses .....	0.25 lbs.

## SAMPLE ENVELOPES

Seed sample envelopes are available from the Association's office. It is advisable to package all seed samples in cardboard for mailing. Experience has shown that damage during handling is minimized when seed is properly packaged.
